

AUO-0221 — Agreement on RBT (associated to tolerances)

The RBT will be fully implemented, as the result of the collaborative planning process that updates the SBT. The RBT will include tolerances that will be used as a trigger for ATM ground systems to identify coordination needs including Network Management. The RBT will also include data elements that will facilitate the dynamic DCB, airspace management and airport functions. The dataset associated to the flight will be highly interoperable and will support the exchange of information as detailed as the RBT data elements. All participants of the RBT flight information environment will be connected via the SWIM network.
