

Solution PJ.05-02 — Multiple Remote Tower Module

Remotely Provided Air Traffic Service for Multiple Aerodromes includes the provision of Aerodrome Control Service or Aerodrome Flight Information Service for more than one aerodrome by a single ATCO/AFISO from a remote location, i.e. not from a control tower local to any of the aerodromes. The ATCO (or AFISO) in this facility performs the remote ATS for the concerned aerodromes. It includes further development of the CWP and MET information from multiple airports. This solution goes beyond the scope of solution #52 (two small aerodromes).
