

Solution #32 — Free Route through the use of Direct Routing

Direct routing is established within direct routing airspace with the aim of providing airspace users additional flight planning route options on a larger scale across FIRs such that overall planned leg distances are reduced in comparison with the fixed route network and are fully optimised.

Direct Routing Airspace defined laterally and vertically with a set of entry/exit conditions where published direct routings are available.

A Direct Routing is a published segment of a great circle between 2 published waypoints.
