<b>OI Steps</b>	CTE-C01a (enabler)
<b>CAPEX</b>	BALTIC, BLUE-MED, DANUBE, FABCE, FABEC, SW FAB

## Main 2016 developments

The objective is now in its crucial phase with two (2) years to convert all frequency assignments required by Reg. (EU) 1079/2012. The EC has tasked NM, through the 8.33 VCS ISG, to take a central role in the coordination of the implementation of 8.33kHz below FL195. The number of States formally reporting the objective late has increased from one (1) to three (3) (DE, FR, NO) which is a cause for concern. 17 States have notified the EC of their intention to grant exemptions from the requirements of the Regulation. It is strongly recommended that all States including ECAA States, actively participate in the 8.33 ISG. The equipment of GA is still a concern due to the high cost of equipage and certification as well as the time available for installation. The EC INEA through CEF has identified the 8.33 radio capability retro-fit as one of the priorities in 2017; consequently several States have applied for funding.
